

# MacD invests in its Machinist Technology Training

MacDiarmid Precision Manufacturing (MacD) is pleased to announce in addition to its new machine purchases and machine enhancements in 2019 and 2020 it has successfully trained all its CNC Machinists to program in a CAD-CAM System. MacD is committed to deliver learning and development solutions to its manufacturing workforce with the assistance of our Regional Vocational Technical High School, Mastercam and CAMWorks Solution Partners. With the support of our Partners and senior members of our manufacturing team we now have seven full time machinist / programmers. This program encouraged employees from different departments to engage in Team Building, awareness and understanding of each other's role.

As MacD continues to expand we remain committed to our workforce training and maintain the most "State of the Art" equipment available to ensure maximum performance and efficiency to service our growing customer base.
